

Thank you for the opportunity to comment on the WA government's climate change discussion paper.

In WA our carbon pollution is fast rising with little seriously been done about this disgraceful fact.

It's time for REAL ACTION on climate change in Western Australia.

1. Declare a climate emergency
2. Create a Clean State Jobs program
3. Power WA with renewable energy only - in the VERY near future.
4. Make WA's biggest polluters pay retribution costs and schedule an emergency phasing out of these companies use of damaging methods.
5. Strong laws need be in place to protect WA's forests and wildlife.
Also to protect our outback and oceans. And our drinking water.

Seems a bit strong perhaps - but on the course we've been going on for far too long we'll literally cook!

Yours sincerely,
John Schreuders
