Subject: Submission - climate change action

Good morning,

We'd like to submit the following regarding the discussion paper on climate change action.

A strong, decisive, urgent change in the sectors of production, transport, business and energy generation is vital for WA and Australia. Currently, WA lags woefully behind many European and Asian countries in most climate change action areas.

We don't yet have widespread renewable energy generation and clean transportation solutions. We don't have the same efficient waste recycling system as for example Sweden and Finland. We don't yet have the same meat and dairy alternatives (mock meat, plant based yogurts etc) widely available in stores to reduce emissions from cattle. WA is well placed to be the leader of the world in particular in harvesting solar energy; and WA has the moral obligation to its residents to cut emissions to mitigate droughts and heat.

We request for strong government action to reduce emissions across all areas of life to ensure WA pulls its weight in solving the global crisis and ensures a livable land for the future years.

Respectfully,
Anu Besson, MA, urban researcher
Eliot Besson, MSc, environmental consultant
