## ELECTRIC VEHICLE (EV) CHARGING GRANTS CASE STUDY

# Juniper

Juniper is a producer of premium wines in Margaret River with vineyards located in Wilyabrup and Karridale. Sustainability is at the heart of Juniper’s philosophy, achieving certification for the winery’s sites under the Sustainable Winemaking Australia scheme in 2023.

Juniper has been conscious of the benefits of installing EV chargers for its customers since installing a 40kW solar system two years ago. The Charge Up Grants provided a good opportunity for Juniper to cost-effectively help its customers make the switch to EVs.

Juniper installed two 22kW AC dual chargers after working with an electrical contractor to determine the best value chargers and site design. Juniper identified the parking area at its cellar door in Wilyabrup as the most appropriate site, due to its proximity to the switchboard, parking, and entrance.

Juniper has seen an increase in visitors since installing the chargers, with drivers charging up while they enjoy the winery. Juniper plans to make best use of these chargers, looking to support the transition of staff and company vehicles.
